Axcelead is committed to its purpose of "Build a healthy future for people worldwide through a groundbreaking Healthcare Platform" through its corporate activities. To achieve this purpose, we have identified "meeting unmet medical needs" as the societal challenge we must address. Over the past year, we have been discussing the impact creation process (logic model) to solve this societal challenge through our business. At the same time, we recognize the great importance of fulfilling our corporate social responsibilities and have identified materialities from both the perspectives of creating social impact and fulfilling our social responsibilities.

With the establishment of the new "Impact" category, we aim to clearly convey Axcelead's approach to impact management by introducing materialities, our logic model, key indicators and the status of our initiatives.

Axcelead will continue to actively disclose information on impact management, striving to maintain and develop good relationships with all stakeholders.
